### About this Car

It's here. Now. Sleeker and more sophisticated, the new KONA Electric features an updated design, the very latest smart tech – and up to 300 miles range on a single charge. And thanks to shortened delivery times in Europe – going electric in style has never been easier. The new KONA Electric's uniquely confident design has been given an even more streamlined, athletic look, while retaining its adventurous SUV flair. The redesign is characterised by smooth, aerodynamic shapes and sculpted lines that flow harmoniously into the body-coloured wheel arch claddings and new, exclusive 17" wheels. KONA Electric doesn't compromise on space – So sit back and relax, there's plenty of space for five adults. But it's also the attention to detail that makes it so special. Discover an exceptional level of comfort with high quality materials throughout for a sensuous and refined feel. The carefully matched components of the electric powertrain have been engineered to provide excellent driving characteristics and a practical everyday driving range. The specially designed platform enables a space-saving integration of the battery packs without compromising roominess. Maximise your range while driving with KONA Electric's regenerative braking systems which let you charge the battery by using the electric motor to slow the car. The new KONA Electric offers a range of charging options to suit your grid connection at home and the types of charging stations you have access to throughout the day. When using a 50 kW direct current (DC) charging station, KONA Electric's lithium-ion polymer battery takes about 48 minutes to charge from 10% to 80% state of charge (SOC) for the 39kWh battery and 64 minutes for the 64 kWh battery. KONA Electric is equipped with an in-cable control box charging cable that you can plug right into a normal wall socket. This charging cable is intended for emergency use only. Charging time to 10% to 100%: 39.2kWh battery: 17 hours / 64kWh battery: 28 hours. Many drivers of electric

vehicles choose to have a wall-mounted charging point installed at home for faster charging vs. a normal 'trickle charge' wall socket. These units are fused independently from the household circuit. POD Point is Hyundai's preferred partner for domestic charge points, please contact local dealer for further details. Charging time at 7.2kW: 39.2kWh battery: 6 hours / 64 kWh battery: 9 hours 15 minutes. For the fastest possible recharging, KONA Electric can be charged at direct current (DC) rapid charger stations. Charging Time at 100kW (10% to 80% SOC): 39.2kWh battery: 47 mins/64kWh battery: 47 minutes Charging Time at 50kW (10% to 80% SOC): 39.2kWh battery: 48 mins/64 kWh battery: 64 minutes. The new KONA Electric features the latest tech and connectivity features like Bluelink® Connected Car Services, which lets you control your car from your smartphone, or with your voice. A free five-year subscription to Hyundai's LIVE Services is included with the 10.25" big screen navigation system. Because nothing's more important than the safety of your loved ones, we gave the new Kona Electric an upgrade. With Hyundai SmartSense, our cutting-edge Advanced Driver Assistance Systems, it has been updated with the very latest safety and driving assist features for added peace of mind. Test drive the Hyundai Kona at John Mulholland Hyundai Randalstown, just 20 minutes from Belfast.
